

Comco's ESD Control ProCenter

If your application involves MicroBlasting static sensitive parts, you need Comco's ESD Control ProCenter. The ESD Control ProCenter has all the features of our standard model, plus these extras specifically designed to minimize the effects electro-static discharge can have on your parts.

- **Ion Air Knife**
- **Custom ESD Control Handpiece and Nozzle**
- **Static Dissipative Floor Panels**

Ion Air Knife

The Ion Air Knife produces a balanced, laminar sheet of ionized air that floods the work chamber. Its compact design enables it to fit in the interior workspace without interfering with the operator's field of vision. It produces a charge-neutralizing environment that protects your valuable components using only a minimum of compressed air. The Ion Air Knife has no moving parts to wear out.

Custom ESD Control Handpiece and Nozzle

The ESD Control ProCenter utilizes a unique static dissipative handpiece with conductive nozzle that is installed directly into the work chamber.

The abrasive line connects to the MicroBlaster™ with our convenient QuickNut connector.

Static Dissipative Floor Panels

Abrasive resistant floor panels in the ProCenter are static dissipative. Additional protection is provided by a board edge-connector grounding bar and a needle probe.

Protection for your Valuable Components

If your micro-abrasive blasting involves conformal coating removal, PCB failure analysis, demarking on electronic components, refurbishing set-top boards, or any other static sensitive application, **Comco's ESD Control ProCenter** is for you!

Call us today at 1-800-796-6626 and let us help solve your static sensitive application issues.
