

MB1455 Connector with Quicknut

The MB1455 connector with Quicknut is now available on all MicroBlaster models. This new feature facilitates routine maintenance. The MB1455 connector with Quicknut is installed where the polyurethane tubing is connected to the back of the MicroBlaster. With the old-style nut and ferrule, changing the abrasive hose meant you had to remove the ferrule from the nut, split it, and work it over the expanded tubing – shredding your fingers in the process!

The Quicknut however, makes it easier than ever to change the abrasive hose. It goes directly over the hose to help work the hose over the stainless nipples on the fittings. The Quicknut is then hand tightened onto the fittings. Because the Quicknut seals the abrasive hose to the fitting without the ferrule, you'll no longer have to wrench your fingers wrestling to cinch it on.

The Extra Bonus – Longer Life!
Not only is the Quicknut easier to use, but the new connector will give you 3 to 5 times longer life than the original connector. This improved resistance to wear will decrease downtime, which results in an increase in productivity.
